

DNTA-1071 - Intro to Orthodontic Assistant

This course is designed for dental professionals seeking foundational knowledge and practical skills in orthodontic assisting. Students will explore the principles of orthodontics, treatment phases, and patient care while gaining hands-on experience in orthodontic procedures. Topics include patient assessments, impressions, radiography, instrument identification, appliance placement, wire adjustments, and aligner applications. Emphasis is placed on clinical skills, patient communication, and professional collaboration.

CEUs: 3.2 hours

Required Prerequisite(s): Registered Dental Assistant Certificate

Recommended Prerequisite(s): 1 year work experience
